

## CASE STUDY

### Adding value in ironmongery specification

Architect James Wyman, has a portfolio of impressive projects to his name, with recent work including the refurbishment of Gee's restaurant in Oxford and the soon to be launched 36 St Giles, a high-end commercial development also in the city. Over the years, James has worked with Oxford Ironmongery to supply door furniture for a wide range of build types and styles.

#### A KNOWLEDGEABLE SERVICE

Specifying ironmongery can be surprisingly complex and challenging, and the implications of a lack of attention to the detail can result in important elements being neglected.

Oxford Ironmongery's Architectural Ironmonger, Chantelle Coney has exceptional knowledge and experience of specifying doors and door furniture, and collaborates with James to ensure that no detail is missed and that a full door schedule is produced to the architectural plans.

#### A TRUSTED RELATIONSHIP

Chantelle's industry connections and excellent relationships with manufacturers mean that whether James has a specific product in mind, or is looking for a bespoke solution, Oxford Ironmongery can supply door furniture that meets the brief. Equally, the team provide proactive input, without over-complicating the project, they make helpful suggestions with a good understanding of the requirement, and their knowledge and expertise is self-evident.

The ability to call into the Headington showroom is extremely useful, when reviewing products and finishes, and whether the project is contemporary or traditional, Chantelle's assistance never seems to be too much trouble.

*Chantelle says: "It's always a pleasure to work with James, and the recent Gee's project was a real opportunity for creativity in ironmongery. I genuinely love the door furniture that we have supplied and think it creates an impact throughout the building."*
